Abstract

This document covers Git Workflow

1 Introduction

In this tutorial, I will cover local git configuration and basic workflow. If you don't already have an account, please begin by creating one through the [github website](#). By the end of the tutorial, you will understand the following:

1.1 Local Configuration

- Configuring Git on Your Local System
- Generating a Public Key
- Adding Public Key to Github Account
- Cloning Your Forked Repository
- Setting Upstream Remotes

1.2 Git Workflow

- Understanding Workflow
- Creating Your Working Branch
- Working with Branches
- Pushing Local Changes Upstream
- Generating Diff Files
- Examples
- Secure Copy
- Squashing and Formatting Commit
- Creating a PR
- Useful Git Commands

2 Git Install

Start by installing Git on your local computer if you haven't already. The github installation guide is found [here](#).
